Summary

I am passionate about problem-solving and enjoy exploring new coding challenges. I understand that there is more to people than just being logical and analytical problem-solvers. Therefore I am able to maintain balance between following a well-thought out process to achieve objectives, while simultaneously engaging with people on an emotional level without compromising the outcome of the project.

Having grown up in a highly disadvantaged school and community, I am a keen contributor to improving the way education is delivered in such schools and communities. I am interested in process design & optimization, coding and upscaling of projects. My journey at WeThinkCode_ equipped me with the skills to be an efficient problem solver as I am able to divide large problems into smaller, manageable and easily understood parts. By offering practical and relevant answers to the concerns of underprivileged people, I hope to contribute to addressing socio-economic problems people face and overall bettering standards of living.

Education

WeThinkCode

Higher National Diploma, Information Technology in Systems Development

Sep 2022 - Dec 2023

I am a WeThinkCode_ student presently studying a Software Engineering program/course with a heavy emphasis in Java. I also have a thorough grasp of Agile methodology, as Agile is our daily culture at WeThinCode_. In addition, I am familiar with front end technologies (HTML and CSS) and have worked with CI/CD pipelines. I have acquired strong leadership and communication abilities.

Skills

TDD • Apache HTTP Server • Miro • APACHE HTTP • WebSocket • HTML • JUnit • Test-Driven Development • JSON • CI/CD
